

# talon™ Desktop

Talon Desktop is a client application in Core Technology's Talon Suite product line. Pressing one button allows the user to search for important data and make split-second decisions. The information returned is organized and easy to read; thus, saving valuable time for details to be reviewed and disseminated.

An authorized user can access data from the State of Michigan system, as well as from local and regional databases. Information received is accurate, complete, and up-to-the-minute. Use Talon to access Michigan driver's license images.

## Features

- \* NCIC compliant
- \* Regional data sharing
- \* Multiple message views
- \* Built-in Instant Messaging
- \* Print messages manually or automatically
- \* Configurable shortcuts
- \* Customize program appearance
- \* Standard queries to multiple data sources
- \* Users can define and view highlighted cautions and warnings to identify critical information
- \* View Michigan driver's license images via TalonPoint connections
- \* Only authorized personnel allowed to access sensitive data
- \* Extensive auditing capabilities ensures proper system usage

## Benefits

- \* 256-bit encryption; two-factor authentication
- \* User friendly
- \* Cost effective

## Talon offers four ways to view data:

- **Activity View:** Displays all messages in a single scrolling window
- **Message List View:** An email type presentation of queries, responses, and broadcast messages
- **Manage Message View:** Messages are organized and displayed in folders, allowing ease of locating information
- **Case View:** Organize information according to category; designed for investigative work
